

CSP**油壓支撐缸****CSP HYDRAULIC SUPPORT CLAMP****產品特性**

- ★高支撐力：提高了活塞桿與夾套間的夾緊力，從而產生更高的工件支撐力。
- ★切削液清潔對策：為防止高壓冷卻液及切屑粉塵侵入內部結構而引發的作動不良，更換工件時可在排氣孔進行空氣清潔。空氣清潔需要專用的氣壓回路。（建議清潔氣壓0.3~0.5MPa）
- ★通用的配管底座：可安裝目前市售相同的日系缸規格，擁有互換性。

液壓上升型：

活塞桿初始狀態為下降，供給油壓使活塞桿上升並接觸工件任意位置後停止，在停止的同時油壓作用於夾套的夾緊力施加於活塞桿，使活塞桿得以穩固的支撐工件。

彈簧上升型：

活塞桿初始狀態為上升，將工件放置於活塞桿上因工件的重量而下降到特定距離，此時供給油壓作用於夾套的夾緊力施加於活塞桿，使活塞桿得以穩固的支撐工件。

接觸力與流量及壓力關係

規 格	油壓(MPa)					Unit:kgf
	3	4	5	6	7	
CSP-26	5	0.2	0.2	0.2	0.2	
	7	0.4	0.6	0.6	0.6	
	10	1	1.2	1.2	1.2	
	5	0.4	0.4	0.4	0.4	
CSP-30	7	1.6	1.8	1.6	1.6	
	10	3.4	3.4	3.4	3.6	
	5	0.2	0.2	0.2	0.2	
	7	2	2	2.2	2

	5	0.6	0.4	0.4	0.4	
	7	3.4	3.2	3.4	3.4	
	10	4	4.2	4.4	4.2	

測試條件為距離油缸4mm~5mm之最大接觸力

FEATURES

High support force: The clamping force between the piston rod and the clamp cover is increased, thus higher workpiece support force is produced.

Cutting fluid cleaning countermeasures: In order to prevent improper actuation caused by high-pressure coolant and chip dust intruding into the internal structure, air cleaning can be performed in the vent hole when replacing the workpiece.

Air cleaning requires a special-purpose pneumatic circuit. (Recommended cleaning air pressure 0.3-0.5MPa)

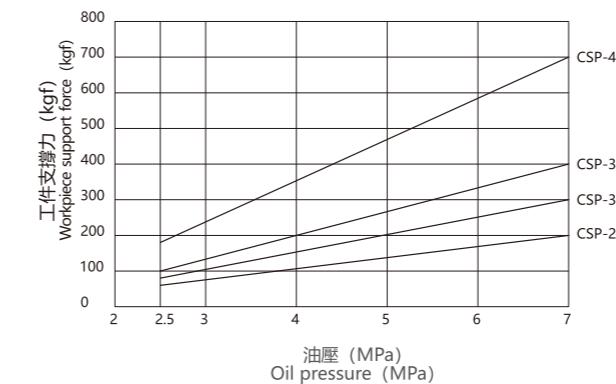

Common piping base: It can be installed with the same Japanese cylinder specifications in the current market and has interchangeability.

Hydraulic pressure rising type:

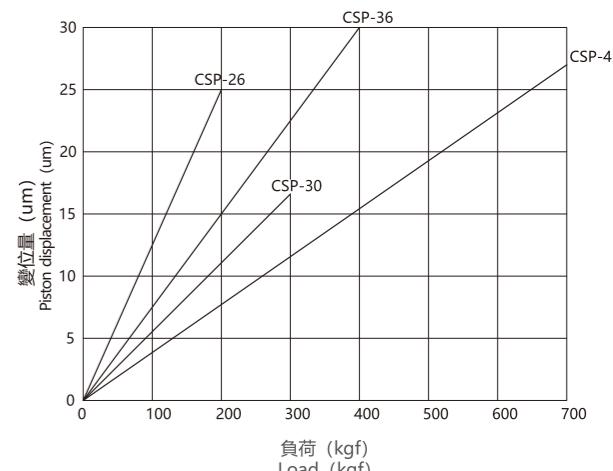

The initial state of the piston rod is falling. The supply oil pressure makes the piston rod rise and stop after getting into contact with any position of the supply part. At the same time, the clamping force acting on the clamp cover by oil pressure is applied to the piston rod, so that the piston rod can firmly support the workpiece.

Spring rising type:

The initial state of the piston rod is rising, and the workpiece is placed on the piston rod and lowered to a certain distance due to the weight of the workpiece. At this time, the clamping force acting on the clamp cover by supply oil pressure is applied to the piston rod, so that the piston rod can firmly support the workpiece.

油壓與工件支撐力的關係

※本圖表示靜態負荷條件下的支持力。

負荷與變位量的關係

※本圖表示供給油壓7MPa條件下的靜態負荷變化。

訂購標示法 ORDERING INDICATION**示例：CSP-30BLK(H)**

**規格參數表 SPECIFICATION**

型 號	工件支撐力 (油 壓為7MPa時) *1	油缸流量	上升彈簧力 *2	活塞桿行程	最高使用壓力	最低使用壓力	保證耐壓	使用溫度	質 量
MOdel	WORKPIECE SUPPORT FORCE (WHEN OIL PRESSURE IS 7MPa) (kgf)	OIL CYLINDER FLOW (cm³)	RISING SPRING FORCE*2 (kgf)	PISTON ROD STROKE (mm)	MAXIMUM WORKING PRESSURE (MPa)	MINIMUM WORKING PRESSURE (MPa)	ENSURE OVERPRESSURE -RESISTANT (MPa)	OPERATING TEMPERATURE (°C)	Q uality (kg)
CSP-26	200	0.5	0.2~0.4	6.5	7	2.5	10.5	0~70	0.2
CSP-30	300	0.7	0.4~0.6	8	7	2.5	10.5	0~70	0.3
CSP-36	400	0.8	0.3~0.5	8	7	2.5	10.5	0~70	0.4
CSP-45	700	2.3	0.3~0.6	10	7	2.5	10.5	0~70	0.7

使用流體：普通礦物油基液壓油（相當於ISO-VG32）

*1: 將支撐缸與夾緊缸對置使用時，為了使支撐力足夠，所使用的支撐缸支撐力應該為夾緊缸與切削負荷的1.5倍以上，請選擇型號匹配的支撐缸與夾緊缸。

*2: 活塞桿上升彈簧力的數值表示彈簧設計值。該值會因活塞桿的滑動阻力、彈簧特性等而產生一定的偏差，所以上升彈簧力為參考值。

Applied fluid: Ordinary mineral oil-based hydraulic oil (equivalent to ISO-VG32)

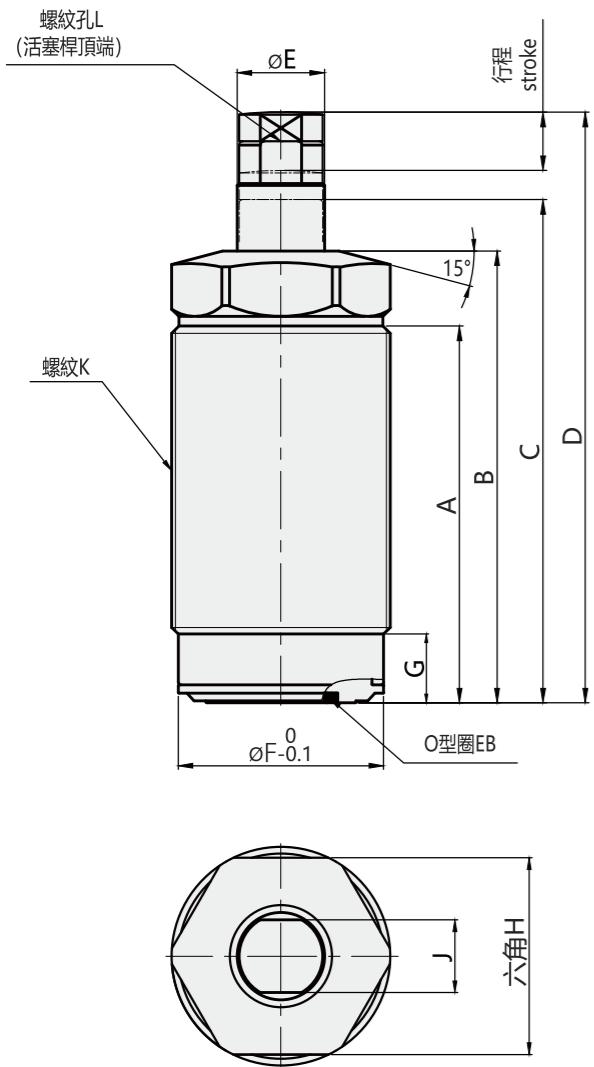

*1: When the supporting cylinder and clamping cylinder are used opposite each other, in order to make the support force sufficient, the support force of the supporting cylinder should be more than 1.5 times that of the clamping cylinder and the cutting load. Please choose the type-matching supporting cylinder and clamping cylinder.

*2: The numerical value of the rising spring force of the piston rod represents the spring design value. This value will produce certain deviation due to the sliding resistance and spring characteristics of piston rod, so the rising spring force is the reference value.

CSP-ALK油壓支撐缸外型尺寸圖

帽蓋詳圖

安裝孔加工圖

注意事項:

- ※1: 排氣孔必須向大氣開放，且應注意防止冷卻液、切屑粉塵等侵入缸體內部。
- ※2: 安裝孔底面最大表面粗糙度應加工在3.25以下。
- ※3: 附帶的O型圈EC要安裝到安裝孔內。

NOTE:

- ※: Vent hole must be open to the atmosphere, and attention should be paid to prevent coolant, chip dust and other intrusions into the cylinder body interior.
- ※2: The maximum surface roughness of the bottom of the installation hole shall be processed below 3.25.
- ※3: The attached O-ring EC should be installed in the installation hole.

注意事項:

- 1、請務必安裝帽蓋，否則工件接觸彈簧將無法支撐工件，用戶自製帽蓋時，請參照帽蓋詳圖，設置O型圈槽，請務必使用附帶的O型圈，否則冷卻液等異物會入侵缸體內部，導致動作異常等故障。
- 2、用戶自製升起彈簧時，本公司不保證活塞桿正確作動。
- 3、如果O型圈破損或丟失，請務必參照型錄上的O型圈規格，不可任意更換其他O型圈尺寸，若有需要請向本公司業務聯繫。
- 4、輕量工件及薄型工件的情況下，請根據需求臨時固定工件，否則會有工件被頂起的現象。
- 5、空氣清潔迴路使用後，務必卸載氣壓，否則可能造成無法復位。
- 6、如果活塞桿上升速度過快，會造成活塞桿接觸工件時出現反彈的現象，並在回彈位置處夾緊，使活塞桿與工件之間產生間隙或形成衝擊，導致內部零件損壞。請通過單向流量控制閥來調整活塞桿的上升動作速度，以使其上升動作時間在0.5~1秒以上，並確認活塞桿與工件之間沒有間隙與衝擊情況後再投入使用。
- 7、請使用啟閉壓力為0.1MPa以下的帶單向閥的流量調整閥。如果閥的啟閉壓力過高，釋放時活塞桿就無法復位。

NOTE:

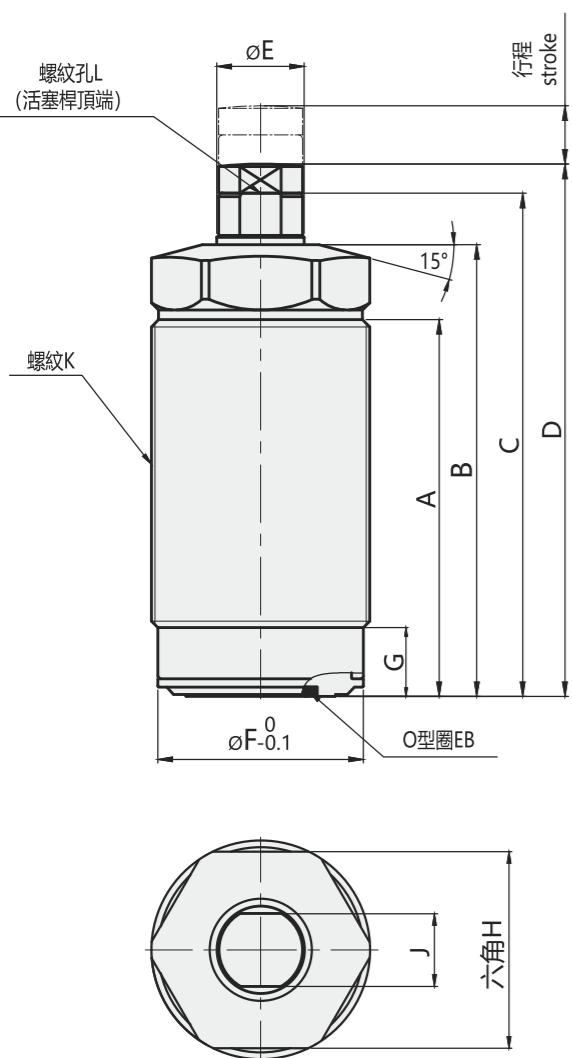

- 1、Be sure to install the cap. Otherwise, the workpiece will not be able to support the workpiece in contact with the spring. When the user makes the cap, please refer to the Cap Detailed Drawing and set O-ring groove. Please be sure to use the attached O-ring. Otherwise, foreign bodies such as coolant will intrude into the cylinder body and cause abnormal operation and other faults.
- 2、The Company does not guarantee the correct action of the piston rod when the user makes the rising spring by himself.
- 3、If the O-ring is damaged or lost, please refer to the specifications of O-ring in the catalogue, and do not change other O-ring sizes arbitrarily. If necessary, please contact our Company.
- 4、In the case of light and thin workpiece, please fix the workpiece temporarily according to the demand, otherwise the workpiece will be jacked up.
- 5、The return of cleaning air pressure will cause the piston rod to be unable to reset if air is supplied all the time.
- 6、If the piston rod rising speed is too fast, it will cause the phenomenon of rebound when the piston rod contacts the workpiece, and clamp at the rebound position, which will cause the gap or impact between the piston rod and the workpiece, leading to the damage of the internal parts. Please adjust the rising speed of the piston rod through one-way flow control valve so that the rising action time is more than 0.5-1 second, and confirm that there is no gap and impact between the piston rod and workpiece before putting into use.
- 7、Please use a flow control valve with a one-way valve under the opening pressure below 0.1MPa. If the opening pressure of the valve is too high, the piston rod cannot be reset when released.
