# Form Talysurf® PGI
NOVUS

The most advanced system for surface finish, contour, 3D and diameter measurement

Form Talysurf® PGI **NOVUS**

The New Form Talysurf®
The New Original

Introducing, the most advanced system for surface finish, contour, 3D and diameter measurement

At the heart of the new Form Talysurf® PGI NOVUS is a ground-breaking dual bias gauge.

The NOVUS gauge provides the ability to measure diameter, included angle, surface finish in a normal and inverted direction with the same speed and accuracy.

Through this development, Taylor Hobson has addressed challenges faced day-to-day by bearings, injectors and precision component manufacturers.

Buy with confidence

When you purchase from Taylor Hobson, you are investing in the most accurate, stable and repeatable measurement system on the market.

The Form Talysurf® PGI NOVUS delivers class-leading:

- Angle
- Radius
- Range
- Diameter
- Form
- Resolution

Instrument shown
0.2 nm resolution,
20 mm range, Dual bias
Powered by Metrology 4.0

Unique benefits for both design and production

One measurement, multiple results, instant feedback

Surface finish - High resolution gauges with low noise enable roughness, waviness and form in one measurement.

Contour - Our patented calibration technique enables measurement of radii, angle, height, length, distance and more.

Topography - Using an optional motorized Y-stage and Metrology 4.0 software, transform your conventional 2D measurements into 3D.

Industry 4.0 - Smart Factories

The future of modern manufacturing

Industry 4.0 philosophy is driving what has been called a 'Smart Factory' through the process of automation, data exchange and control in manufacturing environments.

A "Smart Factory" includes a variety of modern technologies such as, Internet of Things, Internet of People, Cloud computing, Smart sensors and Advanced SPC software.

Taylor Hobson's ongoing developments support this approach and are in line with the Industry 4.0 philosophy.

In so many ways, it's a first
# Advanced metrology, made simple

SMART Move in action

Part drawing

Metrology 4.0 User Interface

Metrology 4.0 - Smart Software

Cutting-edge technology

The advancement in metrology software design that the market has been waiting for...

Taylor Hobson's new advanced software enables dimensioning in accordance with part drawings and provides an exact reflection of the Part Co-ordinate System (PCS) delivering the final link in the manufacturing loop.

Metrology 4.0 software is easy to use with an intuitive user-interface, virtual display and real time control. The state-of-the-art point and move axis control function (SMART Move) delivers precise positioning and accurate measurement.

Operator benefits

Virtual display - simulation of the measurement process with 'at-a-glance' status, on-screen indicators, real-time feedback and remote system control.

SMART Move - intuitive operation for moving and measuring. Once a part has been set-up, the user can then zoom to a detail that the eye cannot see and program around the virtual part.

Variable programming - enables users to automate measurements of a multitude of part sizes without the need for a multitude of programs.

3

The future of modern manufacturing
Industry 4.0 supported by Metrology 4.0

Forward thinking

Metrology 4.0 software includes an intuitive, easy-to-use and modern production interface.

The QDAS accredited production interface is designed for shop floor environments and provides direct communication with SPC software, which delivers feedback to your manufacturing process.

This form of monitoring is used widely in automotive and aerospace component manufacturing, where data and strict standard operating procedure control is mandatory.

User benefits

Programs reduce operator mistakes

Programmed measurement routines reduce cycle times and increase throughput.

Display traceable pass/ fail results and automatic summary reports

Historic traceability is made possible via data exchange and part tracking
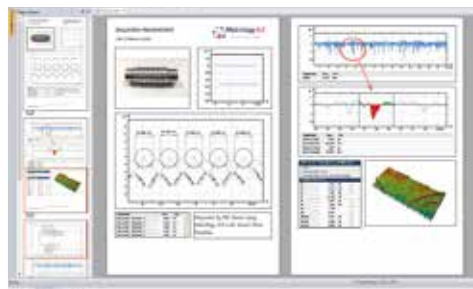

Control can be managed by barcode scanners or tracking/auditing system

Statistics such as automatic R&R studies

Tolerancing - Visually identifies the parameter and tolerance band

Remotely monitor results in Metrology 4.0 production interface

Taylor Hobson metrology directly monitoring production

Modern manufacturing cycle

1. Innovative design.
2. State-of-the-art manufacturing.
3. Fast and automated part-handling.
4. Measurement and analysis powered by Metrology 4.0
5. Feedback of results to data centre for trend analysis.
6. Monitor trends in the field or in production.
7. Improve quality and efficiency.

| Full automation | Accurate machining | Powerful software | Quick feedback | Intelligent Communication | Big data |

Industry 4.0 in action

All of the critical components for the Form Talysurf® PGI NOVUS are manufactured in-house at our UK facility, with unique serial numbers for worldwide traceability.

Taylor Hobson has invested in the latest machining techniques to deliver measurement integrity through manufacturing excellence.

"Our strong investment meets the demands of high technology manufacturing"

Tim Garner, Operations Director. – Taylor Hobson Ltd.

Taylor Hobson's latest investment includes the Mazak Integrex i-200S with 10 axis, twin spindle, in cycle probing, tool break detection, unmanned running, temperature control, zero set up times, auto re-loading, high accuracy glass scales and 110 tool capacity.

The New Form Talysurf®
The New Original

Complete trust in your measurements and results

Fundamental to any metrology system is the integrity and reproducibility of the results it delivers.

The foundation of accurate measurements is the system's noise floor capability. Taylor Hobson take great pride in boasting the worlds best noise floor.

Our product design is underpinned by decades of measurement experience, ultra-precision manufacturing expertise and FEA optimised design.

These attributes provide low noise and near flawless mechanical execution of the measuring axes.

Using a 200 mm stylus provides an industry-leading 40 mm gauge range

World-leading range with the PGI NOVUS gauge

The Form Talysurf® PGI NOVUS delivers 20 mm gauge range with a standard 100 mm stylus.

The PGI NOVUS gauge has been designed to provide the user with greater measurement flexibility. Small, medium and large complex parts can be measured on a single system.

Buy with confidence and future-proof your investment. Using a 200 mm stylus provides an industry-leading 40 mm gauge range with full surface finish capability.

Verification of system measurement accuracy

Taylor Hobson is the only company that can prove radius accuracy and form capability over the **full** gauge range.

This is to certify the integrity and reproducibility of the results the system produces.

Other manufacturers quote less radius accuracy and form capability over a significantly reduced gauge range, indicating less confidence in their measurement results.

Diameter & angle capability with reverse bias gauge

The dual bias NOVUS gauge combined with the new high precision column delivers unparalleled diameter measurements to sub-micron accuracies. This capability is critical to manufacturers of components such as bearings, injectors and ball screws.

The above attributes coupled with the instrument's ability to measure internal or external angle make the Form Talysurf® PGI NOVUS a truly versatile system.

## Bias

Bias options
Dual or single

Software

Powered by
Metrology 4.0

Internal raceway diameter, form and roughness

Reverse bias for PCD analysis along with gothic form and dimensions

Unparalleled diameter measurements to sub-micron accuracies

Easy access to gear teeth using dual tipped small bore stylus

Automated force control to ISO standards

The PGI NOVUS gauge maintains an ISO recommended tip pressure of <75 mgf while using a 200 mm stylus with 2 µm diamond tip.

- Force control is automated and maintained throughout the measurement cycle.
- For softer materials, the stylus force can be adjusted to as low as 30 mgf.
- Automated force control adheres to ISO standard 3274.

Automatic lift-lower

The precise lift-lower function minimises gauge movement and reduces the measurement time while also providing safe and automatic clearance of the part.

Coupled with closed loop feedback, the lift-lower excels during many different modes of measurement:

- Batch.
- Discontinuous (interrupted features).
- Diameter.
- Internal/external bearing.
- Small bore.

World-leading resolution

Large range coupled with a high resolution gives flexibility in measuring large scale profiles while also ensuring small surface details are not lost.

Gauge protection system

Protect your investment from accidental damage and reduce down time by utilising the built-in rapid collision detection system.

The system stops movement in any direction under automatic or manual mode to prevent collision.

Metrology 4.0®
SMART SOFTWARE

In so many ways, it's a first
Advanced metrology, made simple

Designed with the operator in mind

Powerful, intuitive and easy-to-use.

The user interface provides at a glance monitoring of the measurement process.

Real time simulation and true part co-ordinates enable monitoring and control to a level unprecedented in the industry.

Real time display

The TV view allows the user to track the measurement in real time through the on-screen profile.

This is most beneficial if any dirt, marks or obscurities are seen, as the measurement can be stopped at any point, without any loss of data.
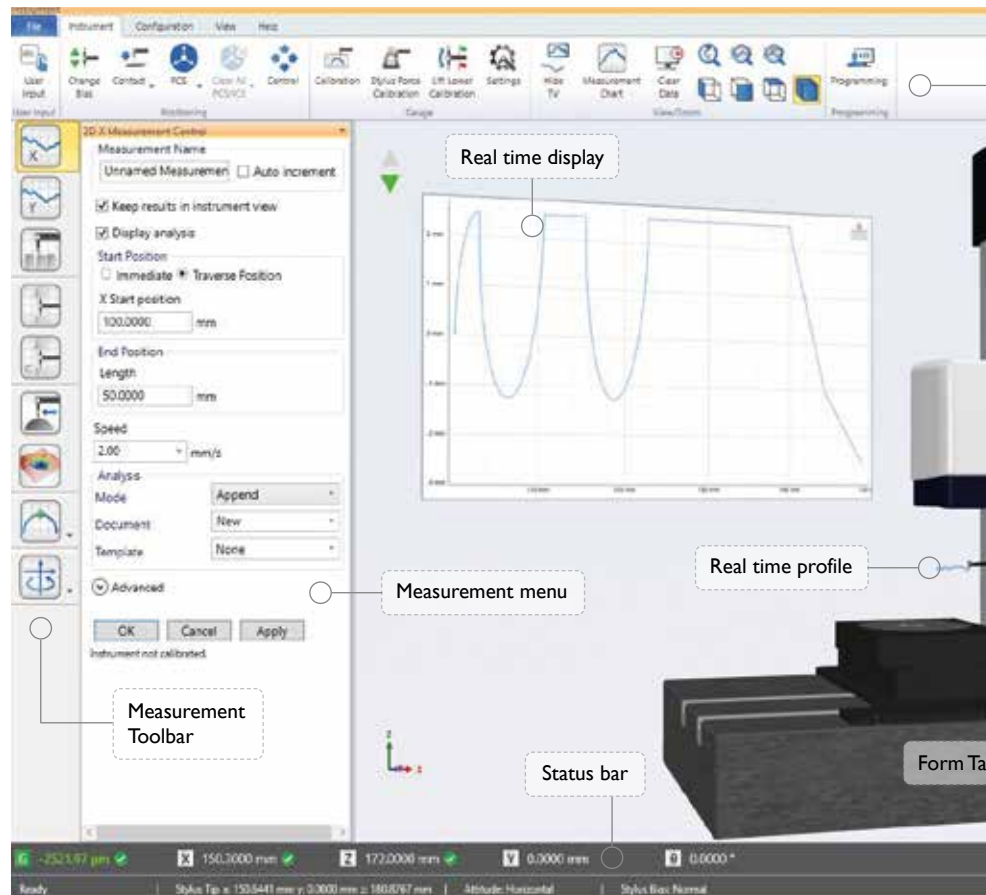

Part Co-ordinate System (PCS)

Metrology 4.0 has two co-ordinate systems; instrument and part.

The part co-ordinate system allows the user to control measurement and movement around any component according to the part drawing.

The on-screen view provides an exact simulation of the real instrument, allowing remote monitoring and at a glance confidence in the measurement process.

Macros

A new software feature that enables the user to define icon-based functions.

These functions can be set to run custom measurement programs, media messages, instructions, warnings, calibration routines, and much more.

The user has instant and configurable access to all macro functions directly from the instrument control ribbon.

Calibration

One hit patented calibration routines provide accurate and precise measurements in both single and dual bias mode.
These routines are fast and do not require operator intervention ensuring maximum performance.

Media messages

Include text, images and videos as operator prompts during programs.
Icon-driven interface

Metrology 4.0 enables simulation of the measurement process with 'at-a-glance' status, on-screen indicators, real-time feedback and remote system control.

A range of different measurement modes are available via intuitive icons on the measurement tool bar. Tool tips give a detailed overview of the measurement.

Metrology 4.0 advanced measurement types

- Discontinuous measurement.
- Internal diameter.
- Crest measurement
- Crest analysis - LS Arc, highest point, lowest point and turning point.
- Alignment routines - Cylinder alignment, axial alignment and auto levelling.

Instrument ribbon

Control toolbar

Form Talysurf PGI

Talysurf® PGI NOVUS

Discontinuous measurement on parts with varying sizes

Simulation of real-time discontinuous measurement

Ball screw measurement using SMART Move

X then Z

Move the traverse unit then column to align the stylus tip with this point

Programming

A range of different modes that offer basic elements such as recordable part programming and an advanced toolbox of programmable features including variables.

The use of variables reduces the time it takes to create and maintain multiple part programs. This function allows one program to be created for a set of parts of differing sizes.

User Levels

Tailor your instrument to suit the operator, from basic production mode to advanced administration use.

The password protected modes provide complete control of a user's access, resulting in a tamper-proof software interface for use in the most secure environments.

SMART Move

A clever tool that allows the user to create points around a part for movement and measurement.

- Simply click on the screen to create a point.
- The instrument will then move the stylus tip to that point.
- The instrument moves using either the traverse, column, Y-stage or a combination of these axes.
- Pre-flight path, allowing the user to predict and control the axes of movement to avoid any obstructions.
- Measurements are made between pre-defined points or from points fed back from the analysis process.
- Improved accuracy and repeatability can be achieved via the unique feedback process.
- A perfect tool for offline programming

Metrology 4.0®
SMART SOFTWARE

In so many ways, it's a first
Advanced metrology, made simple

Dedicated software analysis packages

One software platform does all.

Metrology 4.0 includes desktop publishing, automated feedback, roughness, contour, and 3D analysis.
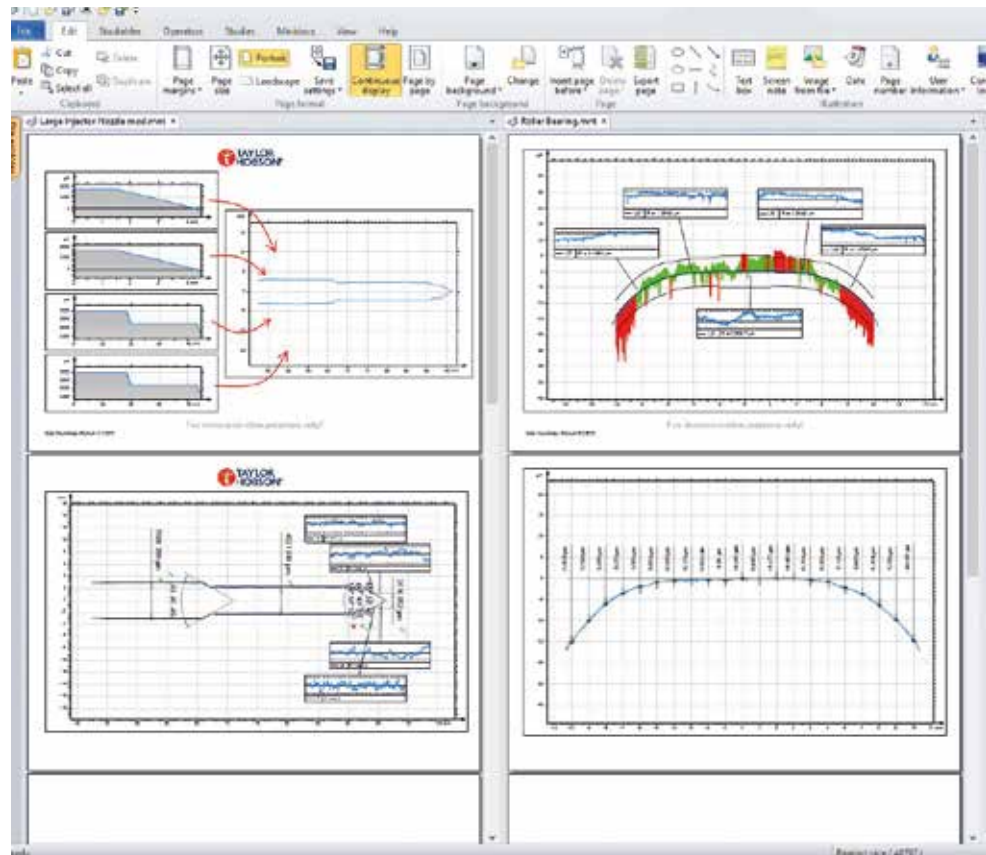

Analysis options:

Surface finish

Contour

Topography

Contour analysis

An essential tool for geometric dimensioning, tolerancing of profiles and full form deviation analysis.

Save time and increase productivity with automation features within Contour analysis.

Topography analysis

Transform your 2D measurement in to a powerful 3D analysis to view surface and defects in greater detail using Metrology 4.0 analysis 3D software and a motorised Y-stage.

Critical analysis types

Surface finish
- Roughness, waviness and primary.
- Form error and radius.
- Rk parameter set.
- R & W parameter set.
- Dominant wavelength.
- Slope analysis.
- Step height.
- Departure from true form (DFTF).
- Localised slope (LSLP).

Topography
- 3D mapping.
- Structured surfaces.

Contour
- Gothic arch.
- Precision diameter.
- Roller profile and drops.
- Angle.
- Wall / Disc thickness.
- Distance measurement.
- Pitch circle diameter (PCD).
- DXF fitting.

Critical analysis functions
- Morphological filtering.
- Dual Profile.
- Data fusion.
- Helix angle correction.
- Profile patching.

Contour and topography analyses are optional.

Desktop publishing

The software allows users to create templates and use them in the analysis process, which vastly simplifies the measurement process.

The desktop publishing features are powerful and simple to use allowing customisation of result layouts and ensuring a more professional and personalised look to your brand.

Benefits

- Generate interactive reports.
- Compose multi-page documents.
- Multiple documents can be displayed on screen, which enables visual comparison of multiple results at once.
- Build a professional report in a matter of minutes.
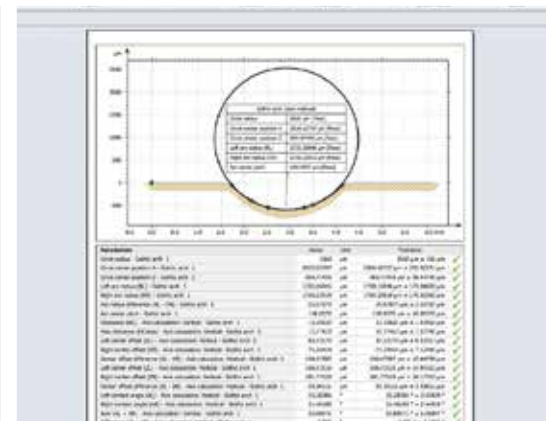

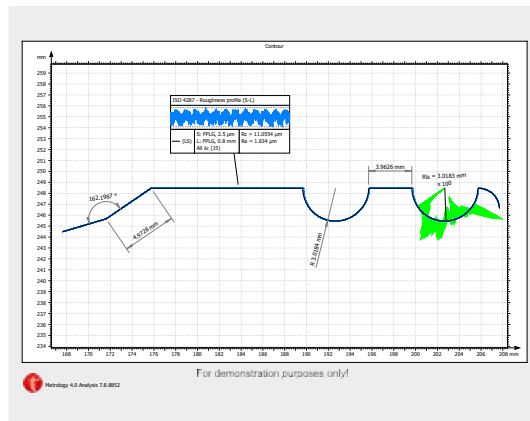

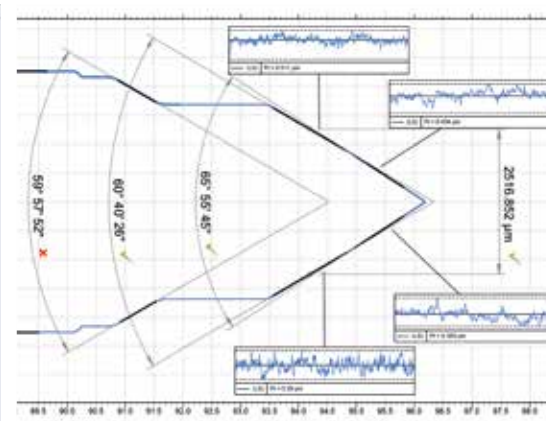

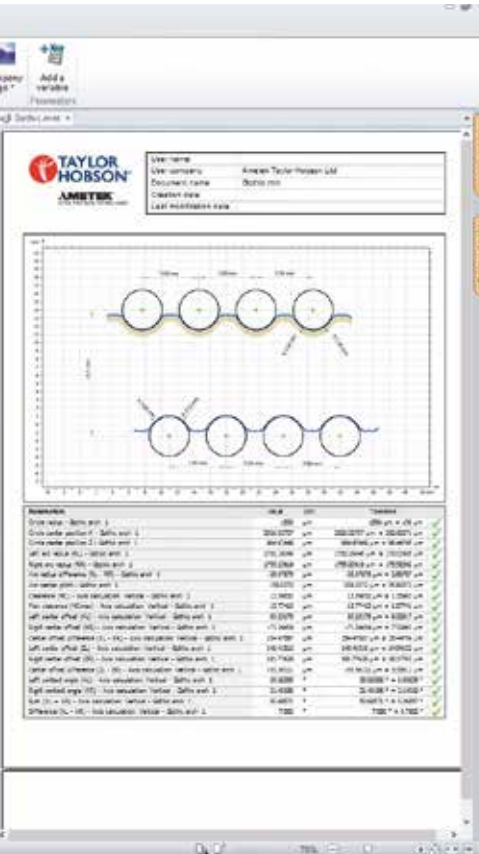

Feedback measurement control

Repeatability and reproducibility are key to any production process. Metrology 4.0 closes the loop between measurement and analysis by feeding positional information back to the movement or measurement process in order to improve process control.

Movement or measurement can react or be controlled via defined features on a part such as intersections.

Feedback process

- Measure profile.
- Create datum points for critical features.
- Add datum points to instrument view.
- SMART Move to start position.
- Measure between specified points.
- Apply template to the analysis.

Customised analysis

Our strategy for success is simple, instead of just selling products, we provide solutions. If our standard software analysis packages do not satisfy your needs, we can customise a solution to match your requirement as an advanced module.

Alternatively Metrology 4.0 has built-in access to execute MATLAB™ files. This enables the user to writing their own scripts and execute them by loading an 'm' file.

Design and program your own...

- Custom filters.
- Custom analyses.
- Custom parameters.

Applications

Ball screw axial measurement - both sides for PCD

The Form Talysurf® PGI NOVUS provides measurement along the full thread profile on both sides of a ball screw or ball nut. Using helix angle correction the profile is transformed to represent measurements perpendicular to the thread.

Analysis includes: Gothic arch form and parameters, contact point and radius analysis, thread axial surface finish, pitch, pitch circle diameter (PCD) and further analysis of the bearing surfaces, alignment mounts and shaft.

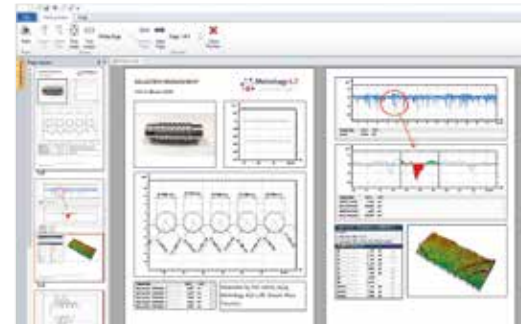

Bearings - spherical, roller and four-point contact

The Form Talysurf® PGI NOVUS combines form and surface finish measurements with the ability to measure precision diameters, providing a comprehensive assessment for numerous types of bearings.

Spherical bearing analysis includes: LS Arc Auto, surface finish, form deviation, raceway diameter and angle.
Roller bearing analysis includes: DXF fitting, roller profile and drops, residual results, tolerancing and surface finish.
Four-point contact bearing analysis includes: Gothic arch, surface finish, dimensions, contact angle, radius, X and Z offset.
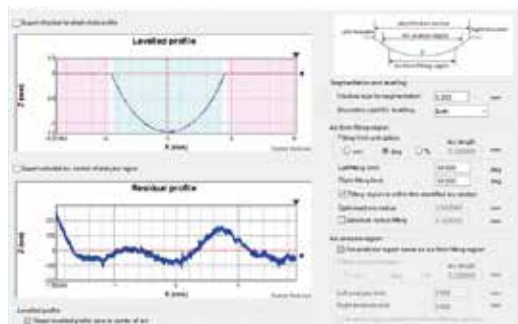

Gears - involute form

Gear surface finish can be assessed and separate involute profiles combined for subsequent analysis.

Analysis includes: Surface finish, morphological filter, profile patching, involute form removal and tooth angle.

Fuel injectors - straightness and seat angle

The dual bias gauge on the Form Talysurf® PGI NOVUS provides unmatched precision for injector pin, diameter and cone angle measurement. Time can be saved by measuring seat straightness and surface finish using a single stylus and morphological filter.

Analysis includes: Auto patch of profiles, diameter and dimensions, true cone angle, surface finish, seat straightness.
Multi-part measurement - using a single program

A single program can be used to auto-detect and measure multiple parts of similar or different sizes. The measurement process is fully automated and can be started by user part selection, auto-part detection or by using a barcode reader.

Capabilities include: Pallet interface, barcode reader, part variables, operator-less attendance and media messaging.
UKAS CALIBRATION 0026   UKAS TESTING 2624

Full traceability to international standards
Critical results, trust Taylor Hobson

Traceability

Taylor Hobson provides full certification for artefacts and instruments in our purpose built ISO graded clean room UKAS facility.

Our UKAS laboratory is able to measure all of the parameters associated with surface texture, including French, German, USA and Japanese derivatives.

Arcuate correction

The Form Talysurf® systems use a patented ball calibration routine to ensure that both dimensional measurement capability and gauge linearity are dealt with in a single, automated operation.

This fast and simple process uses high-precision spherical calibration artefacts that have been produced to exacting standards and then calibrated for radius and form traceable to international standards.

Datum straightness

To ensure the traverse unit conforms to specifications Taylor Hobson can supply Zerodur straightness standards.

These standards provide certainty in the traverse direction and are combined with special software routines to enhance the measuring axis for correct geometrical form.

Surface finish

Taylor Hobson can provide glass or metal roughness standards calibrated to an uncertainty of $\pm(2\% + 4\ nm)$ providing measurement confidence and compliance for peak parameters with respect to ISO standards.

Spacing standards are also available to an uncertainty of $\pm0.6\ \mu m$.

Step height

To ensure the correct gain setting of your instrument, high precision step height standards are available; calibrated with uncertainties down to $\pm4\ nm$.

Grating correction

All our traverse units are tested and enhanced using interferometric techniques ensuring accurate dimensional and surface texture measurement in the x direction.

Designed to meet your individual requirements
Performance in all environments

Configurations

The unique options support high accuracy measurements in all environments from shop floor to laboratory.

1. Form Talysurf® PGI NOVUS, environmental chamber, surround with shelf and display monitors at the front.
2. Form Talysurf® PGI NOVUS, surround with shelf and display monitors at the back.
3. Form Talysurf® PGI NOVUS, surround and display monitor on a separate desk.

Further versions

- Active AV mounts, environmental chamber, surround with shelf and display monitors at the front.
- Standard steel frame with display monitors on separate desk.
