

HORGE

Saving

Lowest energy consumption in the industry (max. 35 kW/h). The integrated lubrication allows the life of the dies to be tripled. Rejects are reduced from 1.5% to 0.4%.

End product

High flexibility and wide range of products that can be forged. Burr-free forging ensures high product quality and a reduction of raw material used.

AUTOMAZIONI INDUSTRIALIS.A.

Productivity

It produces up to 6000 pcs/h, forging four parts at a time. Setup time reduced by 50% compared to standard.

Usability

It is based on the CNC philosophy, in fact every parameter is adjustable in real-time. It is programmable offline via dedicated CAD-CAM.

Forge Tronic FT

Electric press for hot metal forging. Particularly suitable for forging brass and Eco Brass fittings and valves, such as bends.

Products that can be forged

Bends - Ball Valves - Y Fittings - Tees - Crosses Elbows - Couplings

Forge Tronic VT

Electric press for hot metal forging. Particularly suitable for forging brass and Eco Brass fittings, such as nuts.

Products that can be forged

Nuts - Nipples - Sleeves - Couplings

ADVANTAGES

Burr-free parts	High productivity: 4800 pcs/h (4 pcs/time)
Zero vibration and noise	Energy consumption reduced by 66%
Real-time adjustments	No foundation work required
