

Product information PI 57

Disk-type tool turret

with tool drive

Series **0.5.434.0xx**

2015-09-11

Attention

High pressure turret exceeding 50bar : For safety purpose, it is required to use high pressure tool holders which match specifications of turret.

You can request following projection instruction:

- ➡ PA 44.1 Other motors. Tool turret activation
- ➡ PA 44.2 Deltamotor control unit

NOTE:

The information contained in this Product Information is in conformity with knowledge at the point of printing. We reserve the right to perform modifications within the framework of continuous further development.

Disk-Type Tool Turret

Series 0.5.434.0xx with Tool Drive

Description

These turrets are suitable for use on turning machines for forward and reverse machining. They are equipped with all of the features and functions of modern highperformance tool turrets. They are suitable for series manufacture due to their robust design and short switching times.

Features

- Drive with controllable electric motor for very fast bidirectional swivel use of:
 - SAUTER drive with rotary encoder activation and customary control
 - Customary servo motors
- Heavy loads of stability due to high locking forces
- Hydraulic locking with special triple generating crown gear (pat.)
- Not affected by collisions due to:
 - ⇒ Low kinetic energy of the indexing drive
 - ⇒ Fastening snap-ring groove for the tool disk
- Directly controllable with machine controller (not apply to DELTA drive unit EK 700)
- Can be installed in any position
- For all market BMT - interfaces (BMT45 / 55 / 65 / 75 / 85 u.a.)

- 1 Turret housing
- 2 Tool disk
- 3 Connection - hydraulic locking control
- 4 Connection - cooling lubricant
- 5 Connection - Electric
- 6 Motor for indexing drive
- 7 Motor for tool drive

Technical Data

Series			
Disk-type tool turret 0.5.434.0xx			
Number of indexing positions			
Admissible tangential load (turret locked) ¹⁾			kNm
Admissible mass moment of inertia of tools ¹⁾²⁾ with tool disk and holder	Standard		kgm ²
	High load		kgm ²
Admissible out of balance (load moment) due to tooling			Nm
Gear ratio swivel drive			i
Indexing times³⁾			s
Rotate tool disk: ⁴⁾			
• incl. acceleration and braking	per partial step	Standard	s
		High load	s
• without acceleration and braking	per additional partial		s
Turret unlock/lock -hydraulic			s
Adm. indexing frequency ³⁾ (median indexing angle $\alpha_m = 90^\circ$)			
Operation pressure			
Hydraulic $\pm 10\%$			bar
Cooling lubricant			
• Standard			bar
• Medium pressure valve			bar
• High-pressure cooling lubricant device			bar
Fluid absorption volume			
Turret unlock/lock			cm ³
Mass			
Turret (incl. drive motor ⁵⁾)			kg
Tool disk and tooling (max)			kg
Adm. ambient temperature			°C

1) Higher values on request

2) Indexing times on request

3) Conditions:

- Fluid supply sufficiently large
- Turret up to operating temperature
- Without controller-related non-productive time
- Further details see motor chart.

4) The swivel times are determined with an average load.
Further details on request..

5) At design standard housing

6) Ensure compliance with the required filter fineness for the tools used.
For example spindle heads with internal cooling lubricant supply.

Precision

Repeating accuracy
(Multiple move to a switching position from the same direction)

$$\Delta\alpha = \pm 1,6'' \geq \pm 0,8 \times \frac{X[mm]}{100[mm]} [\mu m]$$

Indexing precision
(Multiple move to a switching position from different direction)

$$\Delta\beta = \pm 4'' \geq \pm 2 \times \frac{X[mm]}{100[mm]} [\mu m]$$

Performance Data for the Tool Coupling

The gearbox is designed for the performance data indicated below for the tool coupling.
The actually available performance data depend on the drive motor for tool drive (see below).

Series			Size			
Disk-type tool turret 0.5.434.0xx			16	20	25	32
performance data						
Adm. drive rating ¹⁾	P_{zul}	kW	8	10	12,5	16
Adm. torque ²⁾	M_{zul}	Nm	32	63	100	180
Adm. rpm ¹⁾³⁾	n_{zul}	min ⁻¹	6000	6000	4000	4000
ratio	$i=n_1 / n_2$		1.0	1,0	1,0	1,0
Recommended motors for tool drive						
Siemens servo motor						
Typ 1 FT 6..			.. 84 - 1AK	..086 - 1AH	..105 - 8AF	.. 108 - 8AF
Fanuc servo motor Typ α			12/6000 is	22/4000 is	40/4000 is	50/3000
Fanuc spindle motor Typ α			2	3	6	15 HVi

- 1) The values are reference values for short-term operation. Higher rpm generate more heat and noise,
- 2) Torque limitation at motor converter required! The torque values apply to smooth-machining (such as thread drilling).
In the case of machining with severe shock loads
(e.g. face milling and similar operations) it is necessary to reduce the motor drive torque by 50% or more.
- 3) Higher rpm on request

Admissible duty cycle (DC)

Tool drive
